Phase III of the Fraser Surrey Docks Resurfacing Project is Complete

Phase III of the Container Yard Resurfacing Project at Fraser Surrey Docks was successfully completed on budget during the month of September.

The area that was resurfaced covers 2.5 truck and trailer lanes, a total surface area of 5.4 acres. Phase III continued where Phase II left off at the Matson Tower, which is located between Berth 7 and 8, and continued up river to the curve in the rail tracks and the start of berth 9. Phase IV of the six phase project will break ground early in 2009.

We thank you for your patience during the construction of this project as we continue our commitment to improving the Fraser Surrey Docks facility.
