Fraser Surrey Docks Resurfacing Project Update

Since the beginning of 2006 Fraser Surrey Docks has been undergoing a dramatic face-lift in the Container Yard. The six-phase project is aimed to replace the full depth pavement structures within a majority of the area used for container operations at the terminal.

This year, Phase IV will take place with the expectation of breaking ground on July 20th, 2009. The construction area will undergo a complete restoration of the asphalt tarmac in the container yard. The exact measurement of the area to be resurfaced has not yet been defined, as our engineering department continues to work with the contractors on this point. This portion of the project will not include any rail line refurbishment as some of the past phases had.

Phase IV is scheduled to be completed by the end of September 2009.

We thank you for your patience during the construction of this project as we continue our commitment to improving the Fraser Surrey Docks facility.
