Fraser Surrey Docks Continues to Set the Standard for Container Production in Port Metro Vancouver River Terminal Again Surpassed the 30 Container Moves per Hour mark in September 2009

We are very pleased to announce that Fraser Surrey Docks continues to raise the bar by achieving unprecedented monthly average productions on their container vessels in 2009. Building on a record setting monthly average set in May 2009 of 31.2 container moves per hour (MPH) over all vessels, Fraser Surrey Docks achieved an average of 30.7 MPH over all vessels during the month of September 2009.

Furthermore, Fraser Surrey Docks has steadily maintained their high container productivity over the past six months with production averaging 29.7 MPH over all vessels, from April to September 2009. Over this same time period, 51% of the vessels recorded productions over 30 MPH with 10% of them surpassing 35 MPH.

Fraser Surrey Docks and the International Longshore and Warehouse Union (ILWU – Local 502 and 514) are continuing to aim high as they look to increase the overall amount of vessels that exceed the 35 MPH mark.

We would like to take this opportunity to thank our customers for their dedication and commitment to our terminal as we continue to grow and build on successes such as this one.

Thank you,

Brady Erno
Marketing Coordinator
