Fraser Surrey Docks Resurfacing Project Update – Phase V

Since the beginning of 2006, Fraser Surrey Docks has been undergoing a dramatic face-lift in the Container Yard. The six-phase project is aimed to replace the full depth pavement structure within a majority of the area used for container operations at the terminal.

In 2010, Phase V will take place with the expectation of breaking ground by the middle of June. The area to be resurfaced covers portions of the C and D Lanes and encompasses a total area of 3.7 acres. The Phase V work will continue where Phase IV left off, at the downriver portion of the C Lane and continues up river towards the rail tracks and Shed 6. The construction area will undergo a complete restoration of the asphalt tarmac.

Phase IV is scheduled to be completed by the end of September 2010.

We thank you for your continued patience during the construction of this project as we continue our commitment to improving the Fraser Surrey Docks facility.

Thank You,

Fraser Surrey Docks
